
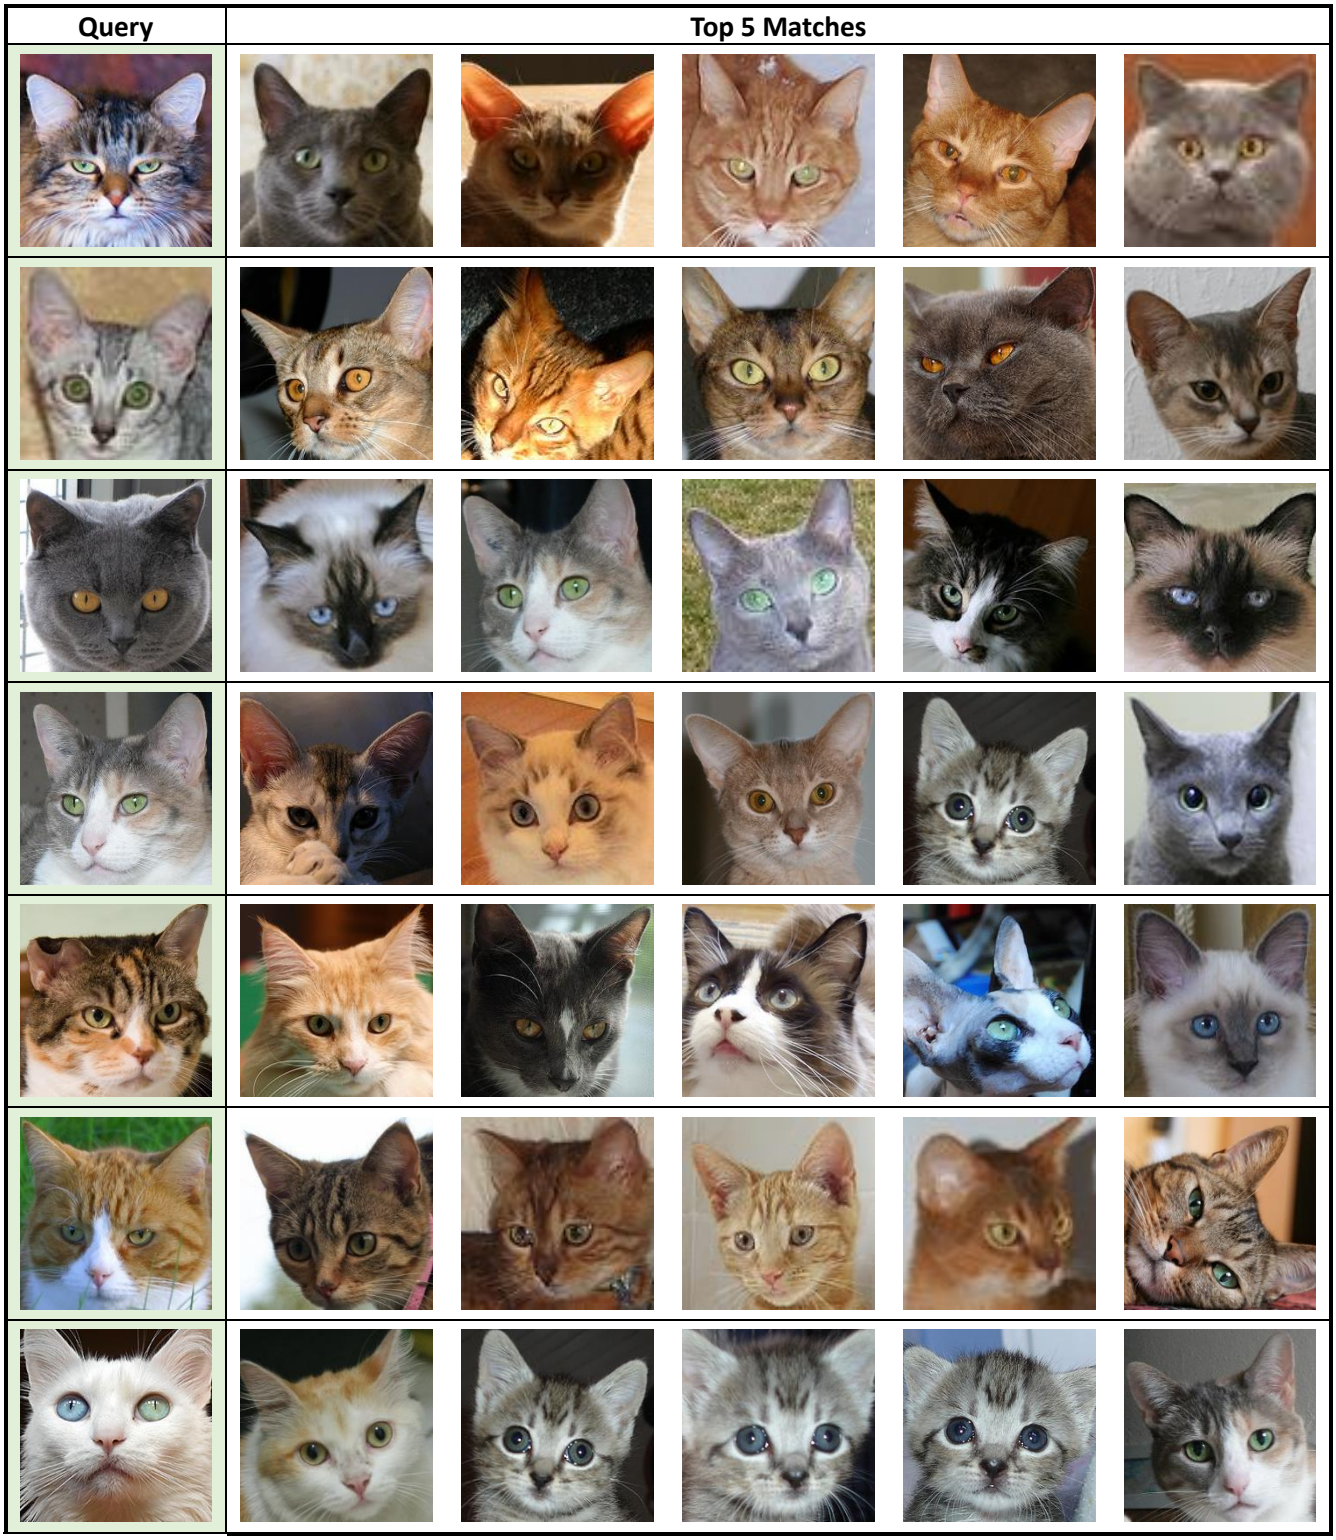

Figure 1. Top 5 matches for query image where the face bounding box was identified by the Haar cascade classifier. Note the cropping applied in this chart for illustrative purposes is approximate.

Figure 2. Top 5 matches for query image where the face bounding box was NOT identified by the Haar cascade classifier. Note the cropping applied in this chart for illustrative purposes is approximate. Note also that the query image would not be cropped to exactly the face, as the face bounding box is estimated to be centered in the image.
